ProfiHub A5

User Manual

User Manual ProfiHub A5

- 5 Isolated Channels
- Transparent for all PROFIBUS DP protocols
- RS 485 specifications for each channel
- Max. 12 Mbps
- Max. 31 devices per channel
- Max. 1200 m spur line length
- No limit in serial placement
- No address required
- Integrated termination facilities
- Configurable grounding system
- IP 65 classification

"5 channel DP spur and repeater component"

Safety Guidelines

This manual contains notices which you should observe to ensure your own personal safety, as well as to protect the product and connected equipment. These notices are highlighted in the manual by a warning sign and are marked as followed according to the level of danger:

Draws your attention to important information on handling the product, a particular part of the documentation or the correct functioning of the product.

Warning

This device and its components may only be used for the applications described in this manual and only in connection with devices or components that comply with PROFIBUS and an RS 485 interface.

This product can only function correctly and safely if it is transported, stored, set up, installed, operated and maintained as recommended.

Qualified Technicians

Only qualified technicians should be allowed to install and work with this equipment. Qualified technicians are defined as persons who are authorized to commission, to ground, to tag circuits and systems in accordance with established safety practices and standards. It is recommended that the technicians carry a Certified PROFIBUS Installer or Certified PROFIBUS Engineer certificate.

Disclaimer of Liability

We have checked the contents of this manual as much as possible. Since deviations cannot be precluded entirely, we cannot guarantee full agreement. However, the content in this manual is reviewed regularly and any necessary corrections included in subsequent editions. Suggestions for improvement are welcomed.

Important information

Purpose of the Manual

This manual explains how to put the ProfiHub A5 into operation.

Recycling and Disposal

The parts of the ProfiHub can be recycled. For further information about environment-friendly recycling and the procedure for disposing of your old equipment, please contact:

1. The Product

The ProfiHub A5 is an advanced, flexible and robust network component for PROFIBUS DP installations, to implement long multi-device spur lines and backbone structures with star/tree segments.

PROFIBUS DP is a high speed communication bus that has to comply with strict rules concerning spur lines, because of possible reflections that could lead to communication disturbances. If spur lines or star segments are required, costly investments in repeaters have to be done.

An innovative component for such applications is the ProfiHub A5. This is a perfect economic solution to implement reliable spur lines in high speed DP networks. It has the functionality of 5 galvanic isolated

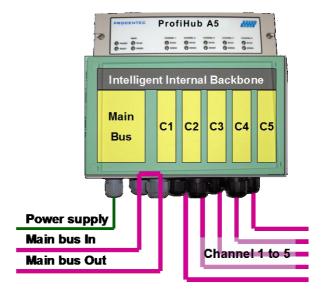

transparent repeaters. This allows network structures with extended spur lines that individually can handle a maximum of 31 devices and a length equal to the main bus. The ProfiHub A5 refreshes a received message on one Channel and transfers it to all the other Channels (chicken foot topology).

Because the ProfiHub A5 creates isolated segments, the devices can now be removed and added during operation. Also electrical bus problems and EMC disturbances in a spur do not spread to the other segments. The intelligent logic and isolation circuits of the ProfiHub does not change the bit width. This means the ProfiHub does not have limitations in serial placement. The logic also detects the transmission speed automatically.

To assist the installation work, termination is integrated and can be switched on/off. The grounding concept is also selectable: direct or capacitive grounding. The ProfiHub A5 is powered by a 10 to 32 DC Voltage (110/230V AC versions are also available). For troubleshooting, maintenance and commissioning the ProfiHub A5 is equipped with a LED display on the outside, which indicates the status of each Channel (Data and Error).

1.1 Product Features

- 5 Galvanic isolated channels (repeater segments)
- Transparent for all PROFIBUS DP protocols
- DP RS 485 specifications for each channel
- 9,6 Kbps to 12 Mbps
- 31 devices per channel
- 1200 m spur line length (depends on transmission speed)
- No limit in serial placement or cascading of ProfiHubs
- No address required
- Integrated termination facilities (switches)
- Configurable grounding system (direct or capacitive)
- IP 65 classification

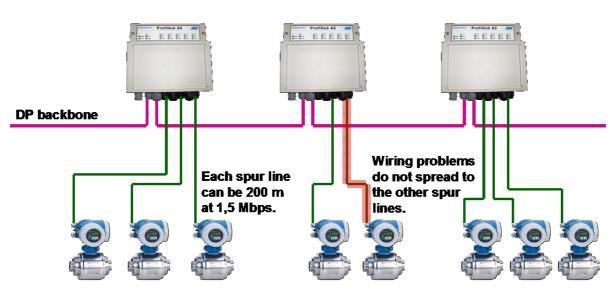

Fig. 1- Long spur lines to instruments and the possibility to remove/insert them during operation. Short circuit protection on each spur line is automatically provided.

1.2 Application areas

- Dynamic spur lines to actuators, flow meters and pH analysers
- Removable drives and motors
- Pull/plug motor control centres (drawers)
- Roof mounted devices in tank farms
- · Dirty and humid environments
- Barrier for non-galvanic isolated equipment
- Large star/tree structured networks
- Outdoor applications with device and cable stress

1.3 Additional Benefits

- Hot slave insertion and removal during operation
- Short circuit protection on each channel
- Compact and robust construction
- Status and error display (per channel)
- Suitable for all DP cables
- · Conveniently arranged networks
- · Easy extendable installations
- Standard glands can be replaced with M12
- On-board DB9 female connector for maintenance activities
- Cost savings

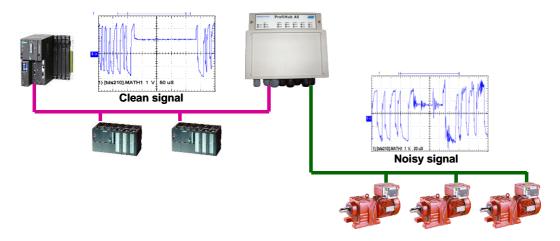

Fig. 2- Because of the isolation and intelligence the ProfiHub provides, it can be used as a barrier for electrically sensitive segments. This keeps the backbone and other Channels clean.

1.4 Channel Structure

Every Channel is electrically isolated and internally connected to the transparent intelligent backbone. The termination is switchable and powered by the ProfiHub. The shielding of the PROFIBUS cable can be directly grounded or indirectly grounded (see the next paragraph).

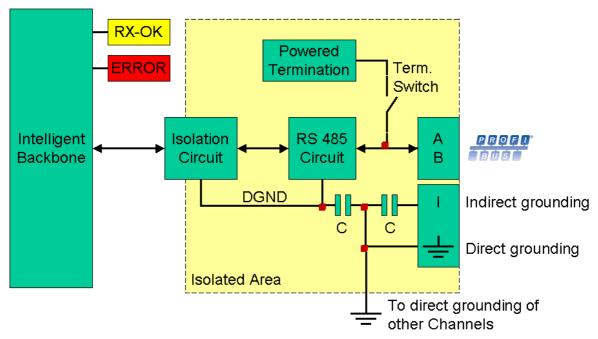

Fig. 3- Channel structure

1.5 Grounding System

The ProfiHub A5 can be grounded by 3 methods:

- 1 Direct grounding
- 2 Indirect grounding (through a capacitor)
- 3 Combination of direct and indirect

The power supply must be grounded directly on the power connector. The shielding of the PROFIBUS cables can be directly or indirectly grounded. If you do not want to ground all or some cables to the common ground, i.e. compensating current, the cable shielding must be connected to pin 'I' which stands for Indirect grounding. A capacitor with a parallel high value resistor will separate the 2 potentials (Fig. 3), ensuring protection of the signal against non-DC disturbances.

If by accident on 1 channel the Direct Grounding is connected with the Indirect Grounding, the connection to the Direct Grounding bypasses the capacitor in the Indirect Ground connection. The current on the shield will flow to Direct Ground.

1.6 Cable lengths for PROFIBUS DP

The cables on the Channels and the Main-Channel should comply with the PROFIBUS DP cable specifications for RS 485 (Fig. 4).

Baudrate (kbit/s)	9.6	19.2	45.45	93.75	187.5	500	1500	3000	6000	12000
Segment length (m)	1200	1200	1200	1200	1000	400	200	100	100	100
Segment lenght (feet)	3940	3940	3940	3940	3280	1310	656	328	328	328

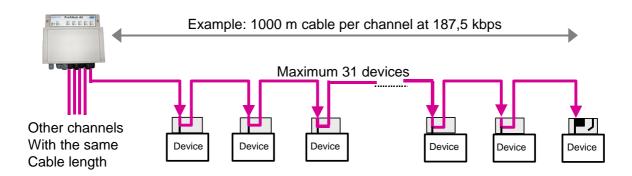

Fig. 4- Cable lengths for PROFIBUS DP

1.7 Cable types for PROFIBUS DP

The cable type should comply with the PROFIBUS DP cable specifications for RS 485 (Fig. 5).

Parameter	Value
Wires	2 (twisted)
Impedance	135 165 Ohm at 3 to 20 MHz
Capacity	< 30 pF/m
Loop resistance	< 110 Ohm/km
Wire diameter	> 0.64 mm
Wire area	> 0.32 mm ²

Fig. 5- PROFIBUS DP cable specifications

The ProfiHub A5 can handle cables based on multiple protection sheaths with a diameter between 6 to 12 mm (Fig. 6).

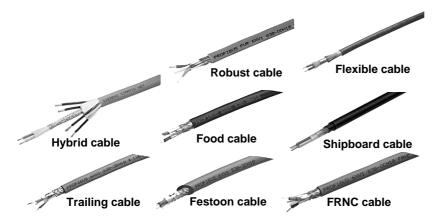

Fig. 6- Cables with different protection sheaths

1.8 Status Display

The Status Display on the ProfiHubs is very useful for diagnostics.

	OFF	Blinking	ON
POWER	Power is not switched on or an internal failure.	Power supply not stable or an internal failure.	© Power supply OK.
Main READY	Power is not switched on or an internal failure.	Trying to detect the transmission speed, but has not locked it yet.	The transmission speed has been detected.
Main RX-OK	No communication detected on the Main-Channel.	① 1 or more devices communicating on the Main-Channel.	① 1 or more devices communicating on the Main-Channel.
Main ERROR	② No problem has been detected.	Problem in the cabling has been detected (Main Channel).	Problem in the cabling has been detected (Main Channel).
Channel RX-OK	There is no communication detected (on this Channel).	① 1 or more devices communicating (on this Channel).	① 1 or more devices communicating (on this Channel).
Channel ERROR	② No problem has been detected.	Problem in the cabling has been detected (on this Channel).	Problem in the cabling has been detected (on this Channel).

1.9 Comparison Table

	ProfiHub A5	ProfiHub B5+R
Area	IP 65	IP 20
Housing	Plastic	Metal
Mounting	Corner screws	DIN-rail
Weight	800 g	650 g
Dimensions	213 x 210 x 95 mm	167 x 111 x 32 mm
PROFIBUS connectors	Screw terminals (inside) Glands (outside)	Screw terminals and DB9 connectors
Redundant channels	No	Yes
Diagnostics slave	No	Optional (B5+RD)

2. Installation Instructions ProfiHub A5

2.1 Location

The ProfiHub A5 can be installed everywhere in a non-hazardous area that complies with IP 65 (DIN 40 050) and the specified temperature range of -40 to $+75^{\circ}$ Celsius.

2.2 Position

The ProfiHub A5 can be installed in every position, but it is recommended to install it with the cable glands pointing down to create a more reliable protection against moist and dust (water compartment and glands). In this position it is also easier to read the status display.

2.3 Mounting

The ProfiHub A5 has 4 mounting holes for 4..5 mm screws (Fig. 7). To reach the holes on position 1 and 2, the top lid has to be removed.

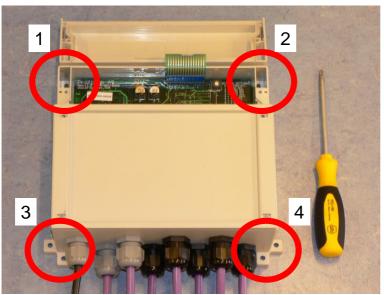

Fig. 7- Positions of the mounting holes.

It is recommended to mount the ProfiHub A5 with at least 4 suitable screws/bolts in position 1, 2, 3 and 4.

Be careful with the flat cable that connects the lid with the PCB.

2.4 Power Supply

The 4-pin screw type power connector is located on the bottom left of the PCB (Fig. 8).

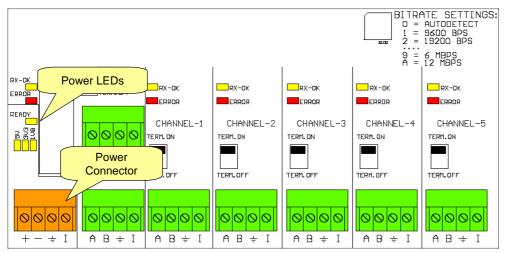

Fig. 8- Power connector and LEDs

The power supply has to comply with the following specifications:

Voltage: 10 to 32 Vdc
 Current: Min. 130 mA
 Wire diameter: < 2,5 mm²
 Cable thickness: 5 to 10 mm

Procedure

To connect the 24V supply to the 4-pin screw-type terminal, proceed as follows:

- Strip the insulation from the cable or the conductors for the 24V power supply
- Secure the conductors in the screw-type terminal

Note: There is a grounding point that can be used.

To connect the power supply, you need a 3 mm screwdriver.

Testing

If the power is switched on it can be diagnosed by the following indicators on the PCB:

- All the LEDs should be shortly blinking
- The READY LED is ON or Blinking
- The voltage LEDs are ON (5V, 3V3 and 1V8)

It is recommended to use a power supply with a ground lead (3-wire).

2.5 Backbone

Connect the DP backbone cable to the bottom connector of the Main-Channel (Fig. 9). If the ProfiHub is not the last device on the bus segment, connect the Bus-Out cable to the top connector of the Main-Channel (Fig. 9).

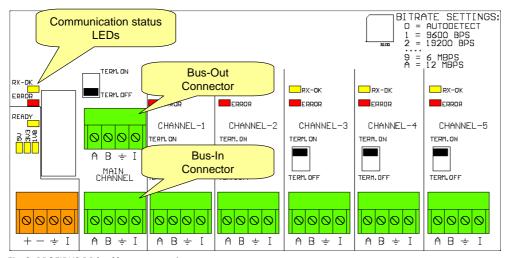

Fig. 9- PROFIBUS DP backbone connection

Pin Layout of the screw terminals

Pin "A": Green wire

Pin "B": Red wire

Pin "I": Cable shielding OR

Pin "♣": Cable shielding

Testing

If the Main-Channel recognizes valid PROFIBUS messages from 1 or more connected devices, the RX-OK LED of this Channel should be blinking.

2.6 Spur Segments

Connect the spur segments to the connectors of Channel 1 to 5 (Fig. 10).

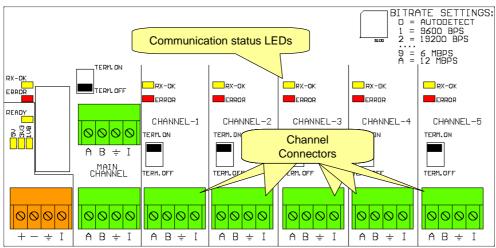

Fig. 10- PROFIBUS DP spur connectors

Pin Layout of the screw terminals

Pin "A": Green wire

Pin "B": Red wire

Pin "I": Cable shielding OR

Pin "[‡]": Cable shielding

Testing

If a Channel recognizes valid PROFIBUS messages from 1 or more connected devices, the RX-OK LED of the specific Channel should be blinking.

2.7 Termination

The termination of the Main-Channel has been set to OFF by default. If the ProfiHub is the last/first device on the segment, the termination should be set to ON (Fig. 11).

The termination of the Channels have been set to ON by default. Because it is assumed that the new segment is started at the ProfiHub (Fig. 11).

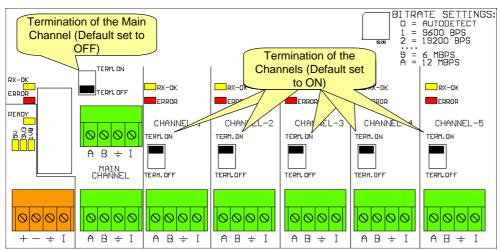

Fig. 11- Termination Switches

Don't forget to switch the termination ON at the other end of the segment and make sure it is powered continuously.

2.8 Baudrate switch

The ProfiHub recognizes the transmission speed by default. If it is required that the ProfiHub is locked to a certain transmission speed, switch S100 should be set to the required value (Fig. 12). The switch can be reached by removing the top lid.

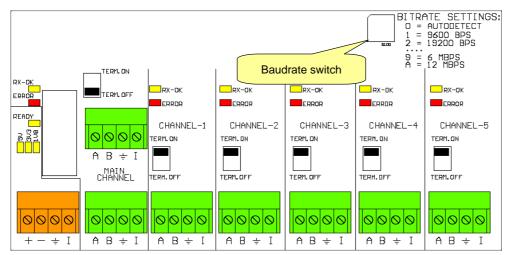

Fig. 12- Baudrate speed switch

To set the transmission speed, you need a 3 mm screwdriver.

Switch values:

- 0 = Auto detect (default)
- 1 = 9,6 kbps
- 2 = 19,2 kbps
- 3 = 45,45 kbps
- 4 = 93,75 kbps
- 5 = 187,5 kbps
- 6 = 500 kbps
- 7 = 1500 kbps
- 8 = 3000 kbps
- 9 = 6000 kbps
- A = 12000 kbps
- B .. F = Auto detect

For the up to date list of the Sales Offices and Distributors see www.procentec.com/company/distributors/. If your country or region is not listed, please contact us. We are still searching for distributors who can cover complete areas or countries.

5. Order Codes

Component	Order code	Remarks
ProfiHub A5	16010	Includes mounting set
ProfiHub A5 with 110V / 230VAC to 24VDC transformer	16013	Includes mounting set Includes power transformer in lid Input power: 110 to 230 VAC instead of 24 VDC
Ground rail	16011	The ground rail has to be mounted inside the casing to supply a common grounding area for all cable shielding. It improves the EMC behaviour and it supplies a good construction for vibrations. Not useable for capacitive grounding!
M12 female flange set	16012	Set of 5 pieces (female)

6. Glossary

Address	Unique number of a device connected to the network. With PROFIBUS this can be 0 to 126. 127 is a broadcast address
Analyzer	Software tool to observe the protocol traffic. Combi-analyzers can also inspect the signal quality Other term: Bus Monitor Example: ProfiTrace
Backbone	The primary bus cable. Most of the time only the control systems, ProfiHubs and fiber optic couplers are connected to this cable. The field devices are connected behind the ProfiHubs and fiber optic couplers.
Bit Time (TBit)	The bit time TBit is the time, which elapses during the transmission of one bit. It depends on the baudrate and is calculated as follows TBit = 1 (bit) / baudrate (bps). Examples: 12 Mbps> TBit = 83 ns 1,5 Mbps> TBit = 667 ns
Busparameters	Settings that define the timing behavior on the bus. They are defined in the master. Examples: Tslot, MaxTSDR.
С	Capacitance
DGND	Digital ground
DIN	German Institute for Standardization (www.din.de)
DP-V0	DP-V0 is the basic stage of the PROFIBUS DP communication protocol. DP-V0 devices (master and slaves) perform the following basic functionalities: Cyclic exchange of I/O data between controlling and slave devices Device, identifier (module) and channel related diagnosis Parameterization of DP-slaves Configuration of DP-slaves
DP-V1	 DP-V1 is the first stage of extension of PROFIBUS DP after DP-V0. DP-V1 devices shall comply with the following features: Device related diagnosis is replaced by status and alarms. The first three octets of the user parameterization data are now standardized Optionally these devices may support: Acyclic communication (MS1, MS2) If alarms are used, MS1 shall be supported

DP-V2	 DP-V2 is the second stage of extension of PROFIBUS DP after DP-V1. DP-V2 devices shall comply with the following features: Data Exchange Broadcast (DxB) for slave to slave communication (publisher/subscriber principle) Isochronous Mode (time tick synchronized operating slaves, e.g. drives) Up- and/or download of Load Region Data (domains) Clock Control (synchronization within slaves) and Time Stamping Redundancy
Electromagnetic Compatibility	See <i>EMC</i>
EMC	The extent to which an electric or electronic device will tolerate electrical interference from other equipment (immunity), and will interfere with other equipment. Within the European Community as well as in other countries it is regulated by law that electric and electronic components and equipment comply with basic standards such as IEC 61000-6-2 or IEC 61326 or corresponding individual product standards.
Hub	A Hub refreshes a signal and passes the information on to all nodes which are connected to the Hub. Data frames which were received on one port are transferred to all the other ports (chicken foot topology).
MPI	Multiple Protocol Interface. Protocol defined by Siemens which uses the layer 1 and 2 of PROFIBUS (FDL).
РСВ	Printed Circuit Board
PROFIBUS DP	 Acronym for "PROFIBUS for Decentralized Peripherals". Specification of an open fieldbus system with the following characteristics: Polling master-slave-system (cyclic communications, MS0) Flying masters with robin round token passing coordination (MM) Connection based (MS1) and connectionless (MS2, MS3) acyclic communication between masters and slaves Options (e.g.): Data exchange broadcast (DXB), i.e. slave to slaves communication Isochronous mode of slaves Clock synchronization Redundancy PROFIBUS DP is standardized within IEC 61158 and IEC 61784, communication profile families 3/1 and 3/2. The term "PROFIBUS DP" also is a synonym for the RS485 based deployments within factory automation.

Repeater	Active physical layer device that receives and retransmits all signals over a different port to increase the distance and number of devices for which signals can be correctly transferred for a given medium.
Spur line	A cable attached to a bus segment with a T-connection . Spurs are not recommended with PROFIBUS DP. They are prohibited with 12 Mbps and PROFIsafe operations. German term is "Stichleitung".
Stub line	See Spur line
TBit	See Bit Time
Termination	A (powered) resistor network at both ends of a segment to prevent reflections (with PROFIBUS DP the termination has to be powered).
Topology	In a communications network, the pattern of interconnection between network nodes; e.g. bus, ring, star configuration.
PI	PROFIBUS International, the International PROFIBUS Organization based in Karlsruhe.
PNO	PROFIBUS Nutzer Organization, tThe German PROFIBUS Organization based in Karlsruhe.
Drop cable	See Spur line
Reflection	Part of the original signal that is transmitted back along the cable. It corrupts the original signal.

7. Certificates

ertificate

QualityMasters hereby declares that

Procentec B.V. Wateringen

has a management system that meets the requirements of the standard

NEN-EN-ISO 9001:2008

for the scope

Providing training courses, technical support, product development and the exploitation of the test laboratory.

Date of original approval

10-02-2003

Date of issue

25-01-2016

Valid until

10-02-2019

Certificate number

NL 6594-uk

On behalf of Stichting QualityMasters,

N.B. The failure to meet the conditions as set forth in the certification agreement, or non-compliance with the given standard and/or guidelines, may lead to the suspension or cancellation of the certificate. This certificate remains the property of Stichting QualityMasters, Nieuwland Part 157, 3351 LF Papendrecht,

Certificate for a PI Competence Center

PI confirms that

PROCENTEC Elmer Vis Klopperman 16 2292 JD WATERINGEN NETHERLANDS

is a fully accredited PI Competence Center for PROFIBUS basic PROFIBUS Process Automation PROFIsafe.

This certificate is granted according to the Quality of Services Agreement for PI Competence Centers and is valid until December 31, 2017.

(Official in Charge)

Chairmen of PI

(Karsten Schneider, Chairman)

(Michael J. Bryant, Deputy Chairman)

Certificate

Authorization as PI Test Laboratory for PROFIBUS

PROFIBUS Nutzerorganisation e.V. accepts
PROCENTEC
Klopperman 16
2292 JD Wateringen
The Netherlands

as authorized PI Test Laboratory for:

PROFIBUS Slave Devices PA Profile Devices

The authorization is based on the assessment dated February 19, 2015, and the related assessment report.

The execution of the tests aimed in the PROFIBUS certification shall be conform to the PROFIBUS Standard and the valid guidelines.

This authorization is valid until December 31, 2016.

Board of PROFIBUS Nutzerorganisation e. V.

K. Schneider)

(K.-P. Lindner)

8. Revision History

V 3.0.0

- Completely changed to new Corporate Identity
- Removed all ProfiHub B5 information
- Updated certificates
- Updated paragraph 1.5

9. Other PROCENTEC products

PROFINET Cable Tester

- Suitable for 4- and 8-wire PROFINET and regular Ethernet cables
- Suitable for straight and 90°, metal or plastic PROFINET plugs
- · Tests cable shielding
- Detects short circuits, wire breaks, swaps, miswiring and split pairs
- · Large LCD clearly indicates the test results
- 150 hours on one 9 V battery
- Operating temperature: 0 to 50 °C
- Just 1-key-press to start continuous testing
- It can also test telephone and coax cable

Compact PROFIBUS Repeater

- Single channel PROFIBUS repeater
- Transparent
- · Increased signal strength
- 12 Mbps
- · Auto baudrate detection
- Redundant power supply
- · Digital glitch filtering
- No limit in cascading
- Integrated switchable termination
- Diagnostic LEDs
- DB9 connector for measurements
- IP 20 with DIN-rail mounting

www.procentec.com/products/profihub

ProfiHub B5+R

- 6 galvanicly isolated channels
- Configurable grounding system
- Redundant power supply
- Bus redundancy option
- Star, tree and bus structured networks
- Alarm contact
- Monitoring port per channel
- IP20
- Certifications: UL Listed, DNV, FCC, CE

www.procentec.com/products/profihub

ProfiTrace

- Busmonitor for DP and PA with powerful statistics
- Oscilloscope ScopeWare
- Bar graph
- Topology scan
- Reporting
- 3-Color network condition indicator
- DP master ProfiCaptain
- ProfiCore Ultra USB interface
- OPC server and CommDTM
- Windows XP, Vista, 7 and 8 platforms
- Multi language user interface

www.procentec.com/products/profitrace

10. About PROCENTEC

PROCENTEC is a specialist in PROFIBUS and PROFINET technology and develops products to optimize the production processes of end users. Our innovative solutions ensure that our customers successfully operate in the world of industrial automation and enjoy maximum results from their process.

PROCENTEC globally supplies all the components required to install a measurable and steerable network. We develop and produce all products in the Netherlands and they are exported through our worldwide distribution network. At PROCENTEC, we have a professional team of qualified support engineers who provide technical support on-site and online. Our professionals have more than 20 years of experience with PROFIBUS and PROFINET technology. They provide the necessary support to end users during implementation procedures, certification processes, audits and malfunctions. PROCENTEC also is an international accredited Competence and Training centre for PROFIBUS and PROFINET. We provide training courses that help employees using those techniques optimally for their business objectives

Products

- ProfiTrace
- ComBricks
- ProfiHub
- PROFINET tools
- Cables & Connectors

Services

- On-site & Online Support
- Network Audit
- Network Certfication
- Consultancy
- Testlab & Democenter
- · Competence Center

Training

- PROFIBUS training courses
- PROFINET training courses
- · Product training courses
